

AAF First Priority CLO Bond ETF (AAA)
(the “Fund”)

October 26, 2020

Supplement to the Summary Prospectus
dated August 31, 2020

and

Prospectus and Statement of Additional Information (the “SAI”)
dated August 14, 2020

The “Principal Investment Strategies” section on pages 1–2 of the Summary Prospectus is supplemented to include the following: “The Fund will not invest in derivatives such as options, futures, swaps, or forwards for any purpose.”

The “LIBOR Discontinuance or Unavailability Risk” in the section entitled “Principal Investment Risks” on page 4 of the Summary Prospectus and the section entitled “Additional Information About the Fund—Principal Investment Risks” on pages 9–10 of the Prospectus is revised to delete references to “derivatives”. Additionally, the second paragraph of the section entitled “Federal Income Taxes—Taxation of Distributions” on page 24 of the SAI is revised to delete references to “derivatives”, and the second paragraph of the section entitled “Federal Income Taxes—Taxation of Fund Investments” on page 27 of the SAI is deleted.

PLEASE RETAIN THIS SUPPLEMENT FOR FUTURE REFERENCE.

PROSPECTUS

AAF FIRST PRIORITY CLO BOND ETF (AAA)

Listed on NYSE Arca, Inc.

August 14, 2020

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission (“SEC”), paper copies of the Fund’s shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the Fund’s reports from your financial intermediary, such as a broker-dealer or bank. Instead, the reports will be made available on a website, and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. Please contact your financial intermediary to elect to receive shareholder reports and other Fund communications electronically.

You may elect to receive all future Fund reports in paper free of charge. Please contact your financial intermediary to inform them that you wish to continue receiving paper copies of Fund shareholder reports and for details about whether your election to receive reports in paper will apply to all funds held with your financial intermediary.

The SEC has not approved or disapproved of these securities or passed upon the accuracy or adequacy of this Prospectus. Any representation to the contrary is a criminal offense.

AAF FIRST PRIORITY CLO BOND ETF

Investment Objective

The AAF First Priority CLO Bond ETF (the “Fund”) seeks capital preservation and income.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold or sell shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Shareholder Fees (<i>fees paid directly from your investment</i>)	None
Annual Fund Operating Expenses (<i>expenses that you pay each year as a percentage of the value of your investment</i>)	
Management Fees	0.25%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.00%
Total Annual Fund Operating Expenses	0.25%

¹ Estimated for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$26 3 Years: \$80

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively-managed exchange-traded fund (“ETF”) that pursues its investment objective by investing, under normal circumstances, at least 80% of its net assets (plus any borrowings made for investment purposes) in AAA rated first priority debt tranches of U.S. dollar-dominated collateralized loan obligations (“CLOs”).

CLOs are trusts that are typically collateralized by a pool of loans, which may include, among others, domestic and foreign senior secured loans, senior unsecured loans and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. The Fund may invest in CLOs of any maturity. The Fund is actively managed and does not seek to track the performance of any particular index.

The Fund principally invests in CLOs with the following criteria:

Rated AAA

No CLO, at the time of purchase by the Fund, will have a rating that is below AAA (or equivalent by a nationally recognized statistical rating organization (“NRSRO”). An NRSRO is a credit rating agency that issues credit ratings that the SEC permits other financial firms to use for certain regulatory purposes. After purchase, a CLO’s rating may decline below the minimum rating required by the Fund for purchase. In such cases, the Adviser will consider whether continuing to hold the CLO is in the best interest of the Fund.

Broadly Syndicated Senior-Secured Loans

The underlying collateral pool for each CLO must be comprised primarily (typically 90%) of broadly syndicated senior-secured first lien loans. A Broadly Syndicated Loan CLO (“BSL CLO”) is a CLO that limits the amount of loan collateral whose offering size is typically less than \$250MM to a maximum of approximately 5% of the portfolio. No investments will be made in middle market CLOs, CBOs, ABS CDOs and synthetic CLOs.

First Priority Tranches Only

The Fund will invest only in the senior-most tranches of CLOs. The cash flows from a CLO trust are generally split into two or more portions, called tranches, varying in risk and yield. Senior tranches are paid from the cash flows of the underlying assets before the junior tranches and equity, or “first loss,” tranches. Losses are first borne by the equity tranches, then by the junior tranches, and finally by the senior tranches. Senior tranches pay the lowest interest rates but are generally safer investments than more junior

tranches because, should there be any default, senior tranches are typically paid first. For the avoidance of doubt, the CLOs that the Fund purchases will be the senior-most tranches, consisting of floating rate bonds that rank first in priority of payments, at the time the CLO is issued. The Fund will not purchase CLO tranches that have subsequently become the senior-most tranches due to amortization of previously more senior tranches.

Minimum Offering and Tranche Size

The Fund will only invest in a CLO with a minimum initial total deal size of \$300 million and minimum initial AAA tranche size of \$150 million.

Maximum Positions Size

The Fund will not invest more than 5% of its total assets in any single security.

Maximum CLO Manager Exposure

The Fund will not invest more than 10% of its total assets in any single CLO manager.

Maximum Weighted Average Rating Factor

Each CLO will have a maximum Weighted Average Rating Factor (the “WARF”) (the “Maximum WARF”), at the time of purchase, of less than the greater of: a) 3,000, and b) the median WARF value of all outstanding broadly syndicated CLOs (as determined by AAF). WARF is a measure that is used by credit rating companies to indicate the quality of a CLO by aggregating the credit ratings of the CLO’s holdings into a single numerical value. If no WARF is calculated by the trustee of a particular CLO, Alternative Access Funds, LLC (the “Adviser” or “AAF”) the Fund’s investment adviser, will at its discretion, invest only in a CLO that it believes would not exceed the Maximum WARF. After purchase, a CLO’s WARF may exceed the Maximum WARF. In such cases, the Adviser will consider whether to continue to hold the CLO. Additional information about the WARF is located in the “Additional Information About the Fund” section.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value per share (“NAV”), trading price, yield, total return and/or ability to meet its objective. The following risks could affect the value of your investment in the Fund:

- **Collateralized Loan Obligations Risk.** A CLO is a trust collateralized by a pool of credit-related assets. Accordingly, CLO securities present risks similar to those of other types of credit investments, including default (credit), interest rate and prepayment risks. The extent of these risks depend largely on the type of securities used as collateral and the class of the CLOs in which the Fund invests. In addition, CLOs are often governed by a complex series of legal documents and contracts, which increases the risk of dispute over the interpretation and enforceability of such documents relative to other types of investments. There is also a risk that the trustee of a CLO does not properly carry out its duties to the CLO, potentially resulting in loss to the CLO.
- **Collateralized Loan Obligations Leveraging Risk.** CLOs are typically leveraged, and such leverage will magnify the loss on CLO investments, which may in turn magnify the loss experienced by the Fund. The cumulative effect of the use of leverage with respect to any investments in a market that moves adversely to such investments could result in a substantial loss that would be greater than if the Fund’s investments were not leveraged. The Fund intends to invest only in the most senior tranches of CLOs (those that are also AAA-rated), which generally are less affected by the effects of leverage than more junior tranches.
- **ETF Risk.** The Fund is an ETF, and, as a result of this structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants (“APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility,

periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

- *Trading.* Although Shares are listed for trading on the NYSE Arca, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Fixed Income Risk.** Current market conditions and the actions of governmental authorities and regulators in response to COVID-19 and its far-reaching effects present heightened risks to fixed-income investments, including the CLOs in which the Fund invests, and the fixed income market, generally. Such risks could be further heightened if such market conditions become more volatile or the governmental and regulatory actions are unexpectedly or suddenly reversed or are ineffective in achieving their desired outcomes. In addition, the current environment is exposing fixed-income and debt markets to significant volatility and reduced liquidity for Fund investments.
 - *Call Risk.* During periods of falling interest rates, an issuer of a callable bond held by the Fund may “call” or repay the security before its stated maturity, and the Fund may have to reinvest the proceeds at lower interest rates, resulting in a decline in the Fund’s income.
 - *Credit Risk.* Debt issuers and other counterparties may not honor their obligations or may have their debt downgraded by ratings agencies.
 - *Extension Risk.* During periods of rising interest rates, certain debt obligations will be paid off substantially more slowly than originally anticipated and the value of those securities may fall sharply, resulting in a decline in the Fund’s income and potentially in the value of the Fund’s investments.
 - *Interest Rate Risk.* An increase in interest rates may cause the value of fixed-income securities held by the Fund to decline. The Fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Variable and floating rate securities may increase or decrease in value in response to changes in interest rates, although generally to a lesser degree than fixed-income securities.
 - *Floating Rate Notes Risk:* Securities with floating or variable interest rates can be less sensitive to interest rate changes than securities with fixed interest rates, but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely, floating rate securities will not generally increase in value if interest rates decline. A decline in interest rates may result in a reduction of income received from floating rate securities held by the Fund and may adversely affect the value of the Fund’s shares. Generally, floating rate securities carry lower yields than fixed notes of the same maturity. The interest rate for a floating rate note resets or adjusts periodically by reference to a benchmark interest rate. The impact of interest rate changes on floating rate investments is typically mitigated by the periodic interest rate reset of the investments. Securities with longer durations tend to be more sensitive to interest rate changes, usually making them more volatile than securities with shorter durations. Floating rate notes generally are subject to legal or contractual restrictions on resale, may trade infrequently, and their value may be impaired when the Fund needs to liquidate such loans. Benchmark interest rates, such as the LIBOR, may not accurately track market interest rates.
 - *Income Risk:* The Fund’s income may decline if interest rates fall. This decline in income can occur because most of the debt instruments held by the Fund will have floating or variable interest rates.
 - *Privately Issued Securities Risk:* The Fund may invest in privately-issued securities, including those that are normally purchased pursuant to Rule 144A or Regulation S under the Securities Act of 1933. Privately-issued securities typically may be resold only to qualified institutional buyers, in a privately negotiated transaction, to a limited number of purchasers, or in limited quantities after they have been held for a specified period of time and other conditions are met for an exemption from registration. Because there may be relatively few potential purchasers for such securities, especially under adverse market or economic conditions or in the event of adverse changes in the financial condition of the issuer, the Fund may find it more difficult to sell such securities when it may be advisable to do so or it may be able to sell such securities only at lesser prices than if such securities were more widely held and traded. At times, it also may be more difficult to determine the fair value of such securities for purposes of computing the Fund’s NAV due to the absence of an active trading market. There can be no assurance that a privately-issued security previously deemed to be liquid when purchased will continue to be liquid for as long as it is held by the Fund, and its value may decline as a result.
- **LIBOR Discontinuance or Unavailability Risk.** The CLO debt in which the Fund may invest bears interest based upon LIBOR (London InterBank Offered Rate). It is expected that after January 1, 2022 LIBOR may no longer be available or no longer deemed an appropriate reference rate upon which to determine the interest rate on or impacting certain loans, notes, derivatives and other instruments or investments comprising some or all of a Fund’s portfolio. In light of this eventuality, public and private sector industry initiatives are currently underway to identify new or alternative reference rates to be used in place of LIBOR, such as the Secured Overnight Financing Rate (SOFR). There is no assurance that the composition or characteristics of any such

alternative reference rate will be similar to or produce the same value or economic equivalence as LIBOR or that it will have the same volume or liquidity as did LIBOR prior to its discontinuance or unavailability, which may affect the value or liquidity or return on certain of the Fund's investments and result in costs incurred in connection with closing out positions and entering into new trades. These risks may also apply with respect to changes in connection with other interbank offering rates (e.g., Euribor) and a wide range of other index levels, rates and values that are treated as "benchmarks" and are the subject of recent regulatory reform.

- **Liquidity Risk.** Liquidity risk refers to the possibility that the Fund may not be able to sell or buy a security or close out an investment contract at a favorable price or time. Consequently, the Fund may have to accept a lower price to sell a security, sell other securities to raise cash, or give up an investment opportunity, any of which could have a negative effect on the Fund's performance. Infrequent trading of securities also may lead to an increase in their price volatility. While CLOs in which the Fund seeks to invest are expected to be highly liquid and supported by an active market, it is possible that they may be characterized as illiquid securities under adverse market conditions resulting in a limited market for the resale of CLOs or affecting the liquidity in the fixed income market, generally.
- **Management Risk.** The skill of the Adviser will play a significant role in the Fund's ability to achieve its investment objectives. The Fund's ability to achieve its investment objectives depends on the ability of the Adviser to correctly identify economic trends, especially with regard to accurately forecasting projected dividend and growth rates and inflationary and deflationary periods. In addition, the Fund's ability to achieve its investment objective depends on the Adviser's ability to select securities, particularly in volatile markets. The Adviser could be incorrect in its analysis of industries, companies' projected dividends and growth rates and the relative attractiveness of value securities and other matters. In addition, the Adviser's stop loss and goal setting process may not perform as expected, which may negatively impact the Fund.
- **Market Risk.** The trading prices of debt securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. The Fund's NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time. Beginning in the first quarter of 2020, financial markets in the United States and around the world experienced extreme and in many cases unprecedented volatility and severe losses due to the global pandemic caused by COVID-19, a novel coronavirus. It is unknown how long circumstances related to the pandemic will persist, whether they will reoccur in the future, whether efforts to support the economy and financial markets will be successful, and what additional implications may follow from the pandemic. The impact of these events and other epidemics or pandemics in the future could adversely affect Fund performance.
- **New Fund Risk.** The Fund is a recently organized, diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision. Additionally, the investment adviser has not previously managed a registered fund, which may increase the risks of investing in the Fund.
- **Transactions in Cash Risk.** The Fund intends to effect its creations and redemptions primarily for cash, rather than in-kind securities. Paying redemption proceeds in cash rather than through in-kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments at an inopportune time to obtain the cash needed to pay redemption proceeds. This may cause the Fund to incur certain costs such as brokerage costs, and to recognize gains or losses that it might not have incurred if it had paid redemption proceeds in kind. As a result, the Fund may pay out higher or lower annual capital gains distributions than ETFs that redeem in kind. In addition, the costs imposed on the Fund will decrease the Fund's NAV unless the costs are offset by a transaction fee payable by an AP.

Performance

Performance information for the Fund is not included because the Fund did not have a full calendar year of performance prior to the date of this Prospectus. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.AAFETFs.com or by calling the Fund toll free at 1-800-617-0004.

Portfolio Management

Adviser Alternative Access Funds, LLC

Portfolio Manager Peter Coppa has been the portfolio manager of the Fund since its inception in 2020.

Purchase and Sale of Shares

The Fund is an ETF. Unlike conventional mutual funds, the Fund issues and redeems Shares on a continuous basis, at NAV, only in Creation Units comprised of blocks of 100,000 Shares, or whole multiples thereof. Shares are not individually redeemable, and may only be issued to or redeemed by or through Authorized Participants. The Fund's Creation Units are issued and redeemed principally for cash, but may also be issued and redeemed "in kind" for securities held by or eligible to be held by the Fund. Retail investors may acquire Shares on the Exchange through a broker-dealer. Shares of the Fund trade on the Secondary Market at market price rather than NAV. As such, Shares may trade at a price greater than NAV (premium) or less than NAV (discount). Investors may incur costs

attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the “bid-ask spread”). Recent information about the Fund, including its net asset value, market price, premiums and discounts, and bid-ask spreads is available on the Fund’s website at www.AAFETFs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUND

Investment Objective

The Fund’s investment objective has been adopted as a non-fundamental investment policy and may be changed without shareholder approval upon written notice to shareholders.

Principal Investment Strategies

The Fund’s principal investment strategies are discussed in the “Fund Summary” section. Principal investment strategies are those that the Adviser will use on a day-to-day basis to achieve the Fund’s investment objective. This section provides more information about these strategies, as well as information about some additional strategies that the Fund’s Adviser uses, or may use, to achieve the Fund’s objective. Additional information about these investment strategies and practices and related risks is also provided in the Fund’s Statement of Additional Information (“SAI”). The Fund may also use strategies and invest in securities that are not described in this Prospectus, but that are described in the SAI. The investments and strategies discussed below are those that the Adviser will use under normal market conditions.

The Fund may borrow to the extent permitted by the Investment Company Act of 1940, as amended (the “1940 Act”). At times, the Fund may be required to segregate or earmark certain assets determined to be liquid by the Adviser (generally, short-term investment grade fixed income securities) to cover borrowings.

The Fund may invest in shares of other ETFs whose underlying investments are consistent with the Fund’s investment objective. As a shareholder in an investment company, the Fund would bear its pro-rata portion of an ETF’s expenses, including advisory fees, in addition to its own expenses. Although the 1940 Act limits investments by registered investment companies in the securities of other investment companies, registered investment companies, including the Fund, are permitted to invest in certain ETFs beyond the limits set forth in the 1940 Act, subject to certain terms and conditions including entering into an agreement with such ETF.

Any percentage limitations with respect to the investment of the Fund’s assets or quality requirement of issues or issuers in which the Fund invests are applied at the time of purchase. In anticipation of or in response to adverse market or other conditions or atypical circumstances as determined by the portfolio manager, such as unusually large cash inflows or redemptions, the Fund may temporarily hold all or a portion of its assets in U.S. Government securities, money market funds, cash or cash equivalents. Under such conditions, the Fund may not invest in accordance with its investment objective or principal investment strategies and may not achieve its investment objective.

An NRSRO is a credit rating agency that issues credit ratings that the U.S. Securities and Exchange Commission permits other financial firms to use for certain regulatory purposes.

In accordance with Rule 35d-1 under the 1940 Act, the Fund will invest, under normal circumstances, at least 80% of its net assets, plus any borrowings made for investment purposes, in AAA-rated first priority debt tranches of U.S. dollar-dominated CLOs. The foregoing policy may be changed without shareholder approval upon 60 days’ written notice to shareholders.

For temporary defensive purposes, the Fund may invest in short-term instruments such as commercial paper and/or repurchase agreements collateralized by U.S. government securities, corporation obligations, municipal debt securities, MBSs, or convertible securities. Taking a temporary defensive position may result in the Fund not achieving its investment objective.

WARF is calculated by the trustee of a CLO on a monthly basis. It is a numerical representation of the aggregate credit risk of the underlying portfolio of loans. It is calculated as a weighted average of the Moody’s Rating Factor values for each of the individual

loans in the CLO portfolio. The table below provides a mapping between Moody's Rating Factors and Moody's credit ratings of each loan.

Moody's Rating	Moody's Rating Factor
Aaa	1
Aa1	10
Aa2	20
Aa3	40
A1	70
A2	120
A3	180
Baa1	260
Baa2	360
Baa3	610
Ba1	940
Ba2	1350
Ba3	1766
B1	2220
B2	2720
B3	3490
Caa1	4770
Caa2	6500
Caa3	8070
Ca-C	10000

The Fund's Maximum WARF constraint effectively imposes credit quality limitations on the CLOs that are eligible for inclusion in the Fund's portfolio. While the Maximum WARF seeks to limit the Fund's exposure to the risks of investing in lower-rated CLOs, such as CLOs with exceedingly large balances of low-rated (B3, Caa, Ca-C) loans, whether by design or due to credit migration, it also may limit the upside performance potential of the Fund's investments in CLOs.

Principal Investment Risks

An investment in the Fund entails risks. The Fund could lose money, or its performance could trail that of other investment alternatives. The following provides additional information about the Fund's principal risks. It is important that investors closely review and understand these risks before making an investment in the Fund. Just as in the Fund's summary section above, the principal risks below are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears.

- Collateralized Loan Obligations Risk.** A CLO is a trust typically collateralized by a pool of credit-related assets, which may include, among others, domestic and foreign senior secured loans, senior unsecured loans, and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. The cash flows from the trust are split into two or more portions, called tranches, varying in risk and yield. The riskiest portion is the "equity" tranche, which bears the bulk of defaults from the bonds or loans in the trust and serves to protect the other, more senior tranches, including those in which the Fund intends to invest, from default in all but the most severe circumstances. Because it is partially protected from defaults, a senior tranche from a CLO trust typically has higher ratings and lower yields than its underlying securities, and can be rated investment grade. Despite the protection from the equity tranche, CLO tranches can experience substantial losses due to actual defaults, increased sensitivity to defaults due to collateral default and disappearance of protecting tranches, and market anticipation of defaults. CLO securities present risks similar to those of other types of credit investments, including default (credit), interest rate and prepayment risks, and the extent of these risks largely depends on the type of securities used as collateral and the class of the CLO in which the Fund invests. In addition, CLOs are often governed by a complex series of legal documents and contracts, which increases the risk of dispute over the interpretation and enforceability of such documents relative to other types of investments. There is also a risk that the trustee of a CLO does not properly carry out its duties to the CLO, potentially resulting in loss to the CLO. CLOs are also inherently leveraged vehicles and are subject to leverage risk. A CLO may be characterized as an illiquid security due to a limited market for the resale of such CLO or adverse market conditions affecting CLOs, generally.

In seeking to mitigate market disruptions related to the COVID-19 pandemic, the Federal Reserve has, as part of its many economic interventions, included AAA-rated CLO paper within the scope of certain of its stimulus programs. In particular, on March 17, 2020, the Federal Reserve began accepting AAA-rated CLO bonds as collateral for its Primary Dealer Credit Facility and, on April 9, 2020, the Federal Reserve announced that it would include AAA-rated CLO paper as part of its Term Asset-Backed Securities Loan Facility. There is no guarantee that the Federal Reserve will continue to provide such validation and support of CLOs and, if it ceases to do so, any subsequent restart of the CLO markets could be adversely affected.

- **Collateralized Loan Obligations Leveraging Risk.** CLOs are typically leveraged, and such leverage will magnify the loss on CLO investments, which may in turn magnify the loss experienced by the Fund. The cumulative effect of leverage with respect to any investments in a market that moves adversely to such investments could result in a substantial loss that would be greater than if the Fund's investments were not leveraged. For example, a liquidity crisis in the global credit markets could cause substantial fluctuations in prices for leveraged loans and high-yield debt securities and limited liquidity for such instruments. In addition, loans underlying the CLOs in which the Fund may invest may be made to finance highly leveraged corporate transactions. The highly leveraged capital structure of the borrowers in such transactions may make such loans especially vulnerable to adverse changes in economic or market conditions.

A CLO is subject to a “waterfall” or a set of rules that dictates how the principal and interest proceeds from the underlying portfolio of corporate loans will be allocated among the tranches. These proceeds are allocated first to the most senior tranches, then sequentially lower through the other tranches, and finally to the equity. Any potential losses in the underlying loan portfolio will be realized in reverse sequential order and absorbed first by the equity tranche, then the non-senior debt tranches, and finally the most senior bonds. In this sense, the non-senior tranches can be viewed as inherently leveraged since they are not first in priority of payments; in the same vein, the most senior tranche of a CLO (the target assets for the Fund) can be viewed as unlevered.

The Fund will invest in the most senior tranches of CLOs (those that are also AAA rated), floating rate bonds that rank first in priority of payments, only. So, while certain junior tranches of CLOs may be viewed as inherently leveraged, the Fund's holdings generally will be less affected by the effects of leverage as they are protected from losses to some extent by the presence of junior tranches.

- **Cyber Security, Market Disruption and Operational Risk.** The Fund and its service providers, as well as exchanges and market participants through or with which the Fund trades and other infrastructures and services on which the Fund or its service providers rely, are susceptible to ongoing risks related to cyber incidents and the risks associated with financial, economic, health, labor and other global market developments and disruptions. Cyber incidents, which can be perpetrated by a variety of means, may result in actual or potential adverse consequences for critical information and communications technology, systems and networks that are vital to the operations of the Fund and/or its service providers. A cyber incident or sudden market disruption could adversely affect the Fund – its operation or investments, its service providers or its shareholders by, among other things, interfering with the processing of shareholder transactions or other operational functionality, adversely affecting the Fund's ability to calculate its NAV or other data, causing the release of private or confidential information, impeding trading, causing reputational damage, and subjecting the Fund to fines, penalties or financial losses or otherwise adversely affecting the operations, systems and activities of the Fund, its service providers and market intermediaries. These types of adverse consequences also could result from other operational disruptions or failures arising from, for example, processing errors, human errors, and other technological issues. In each case, the Fund's ability to calculate its NAV correctly, in a timely manner or process trades or Fund or shareholder transactions may be adversely affected, including over a potentially extended period. The Fund and its service providers may directly bear these risks and related costs. The Fund and its service providers also may be affected by quarantines and similar measures enacted by governments in response to COVID-19, which are obstructing the regular functioning of business workforces (including requiring employees to work from external locations and their homes). Accordingly, the risks described above are heightened under current conditions.

- **ETF Risk.** The Fund is an ETF, and, as a result of the structure, it is exposed to the following risks:

- *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the “bid” price) and the price at which an investor is willing to sell Shares (the “ask” price). This difference in bid and ask prices is often referred to as the “spread” or “bid/ask spread.” The bid/ask spread varies over time for Shares based on trading volume and market liquidity, and is generally lower if Shares have more trading volume and

market liquidity and higher if Shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund and/or increased market volatility may cause increased bid/ask spreads. Due to the costs of buying or selling Shares, including bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility or periods of steep market declines. The market price of Shares during the trading day, like the price of any exchange-traded security, includes a "bid/ask" spread charged by the exchange specialist, market makers or other participants that trade Shares. In times of severe market disruption, the bid/ask spread can increase significantly. At those times, Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that you most want to sell your Shares. The Advisers believe that, under normal market conditions, large market price discounts or premiums to NAV will not be sustained because of arbitrage opportunities.
- *Trading.* Although Shares are listed for trading on the Exchange and may be listed or traded on U.S. and non-U.S. stock exchanges other than the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to Exchange "circuit breaker" rules, which temporarily halt trading on the Exchange when a decline in the S&P 500 Index during a single day reaches certain thresholds (e.g., 7%, 13%, and 20%). Additional rules applicable to the Exchange may halt trading in Shares when extraordinary volatility causes sudden, significant swings in the market price of Shares. There can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares.

- **Fixed Income Risk.**

- *Call Risk.* During periods of falling interest rates, an issuer of a callable bond held by the Fund may "call" or repay the security before its stated maturity, and the Fund may have to reinvest the proceeds at lower interest rates, resulting in a decline in the Fund's income.
- *Credit Risk.* Debt issuers and other counterparties may not honor their obligations or may have their debt downgraded by ratings agencies. This risk may be especially acute with respect to high yield securities, whose issuers are particularly susceptible to failure to meet repayment obligations principal under current conditions. An issuer may suffer adverse changes in its financial condition or be adversely affected by economic, political or social conditions that could lower the credit quality (or the market's perception of the credit quality) of a security, leading to greater volatility in the price of the security and the value of the Fund. A change in the credit quality rating of a security can affect its liquidity and make it more difficult for the Fund to sell. Although credit quality may not accurately reflect the true credit risk of a security, a change in the credit quality rating of a security or an issuer can have a rapid, adverse effect on the instrument's liquidity and make it more difficult for the Fund to sell at an advantageous price or time. The risk of the occurrence of these types of events is especially heightened under current conditions. Any applicable limitation on the credit quality of a security in which the Fund may invest is applied at the time the Fund purchases the security.

Credit quality is a measure of the issuer's expected ability to make all required interest and principal payments in a timely manner. An issuer with the highest credit rating has a very strong capacity with respect to making all payments. An issuer with the second highest credit rating has a strong capacity to make all payments, but the degree of safety is somewhat less. An issuer with the lowest credit quality rating may be in default or have extremely poor prospects of making timely payment of interest and principal. Investment grade securities are fixed-income securities that have been determined by a nationally recognized statistical rating organization to have a medium to high probability of being paid (although there is always a risk of default), or which, if unrated, have been determined by the Adviser to be of comparable quality. If nationally recognized statistical rating organizations assign different ratings to the same security, the Fund will use the higher rating for purposes of determining the security's credit quality.

- *Extension Risk.* During periods of rising interest rates, certain debt obligations will be paid off substantially more slowly than originally anticipated and the value of those securities may fall sharply, resulting in a decline in the Fund's income and potentially in the value of the Fund's investments.
- *Interest Rate Risk.* An increase in interest rates may cause the value of fixed-income securities held by the Fund to decline. Longer term fixed income instruments and zero coupon bonds are generally more sensitive to interest rate changes than shorter-term fixed income instruments. Generally, the longer the average maturity of the fixed income investments in the Fund, the more the Fund's share price will fluctuate in response to interest rate changes. If an issuer calls or redeems an investment during a time of declining interest rates, the Fund might have to reinvest the proceeds in an investment offering a

lower yield, and therefore might not benefit from any increase in value as a result of declining interest rates. Securities with floating interest rates, such as syndicated bank loans, generally are less sensitive to interest rate changes, but may decline in value if their interest rates do not rise as much or as fast as interest rates in general. Changes in government or central bank policy, including changes in tax policy or changes in a central bank's implementation of specific policy goals, may have a substantial impact on interest rates, and could have an adverse effect on prices for fixed income securities and on the performance of the Fund. In particular, interest rates in the U.S. are at or near historically low levels and as a result, fixed income securities markets may experience heightened levels of interest rate risk. Any unexpected or sudden reversal of the fiscal policy underlying current interest rate levels could adversely affect the value of the Fund. There can be no guarantee that any particular government or central bank policy will be continued, discontinued or changed, nor that any such policy will have the desired effect on interest rates.

There is a risk that interest rates across the financial system may change, sometimes unpredictably, in response to a variety of factors, such as central bank monetary policies, inflation rates and general economic conditions. Very low or negative interest rates may magnify the Fund's susceptibility to interest rate risk and diminish yield and performance (e.g. , during periods of very low or negative interest rates, the Fund may be unable to maintain positive returns). Changes in fixed-income or related market conditions, including the potential for changes to interest rates and negative interest rates, may expose fixed-income or related markets to heightened volatility and reduced liquidity for Fund investments, which may be difficult to sell at favorable times or prices, causing the value of the Fund's investments and NAV per share to decline. A rise in general interest rates also may result in increased redemptions from the Fund. Very low, negative or changing interest rates also may have unpredictable effects on securities markets in general, directly or indirectly affecting the Fund's investments, yield and performance.

In response to the outbreak of COVID-19, as with other serious economic disruptions, governmental authorities and regulators are enacting significant fiscal and monetary policy changes, including providing direct capital infusions into companies, creating new monetary programs and lowering interest rates considerably. These actions present heightened risks to fixed-income and debt instruments, and such risks could be even further heightened if these actions are unexpectedly or suddenly reversed or are ineffective in achieving their desired outcomes. In addition, the current environment is exposing fixed-income and debt markets to significant volatility and reduced liquidity for Fund investments.

- *Floating Rate Notes Risk.* Securities with floating or variable interest rates can be less sensitive to interest rate changes than securities with fixed interest rates, but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely, floating rate securities will not generally increase in value if interest rates decline. A decline in interest rates may result in a reduction of income received from floating rate securities held by the Fund and may adversely affect the value of the Fund's shares. Generally, floating rate securities carry lower yields than fixed notes of the same maturity. The interest rate for a floating rate note resets or adjusts periodically by reference to a benchmark interest rate. The impact of interest rate changes on floating rate investments is typically mitigated by the periodic interest rate reset of the investments. Securities with longer durations tend to be more sensitive to interest rate changes, usually making them more volatile than securities with shorter durations. Floating rate notes generally are subject to legal or contractual restrictions on resale, may trade infrequently, and their value may be impaired when the Fund needs to liquidate such loans. Benchmark interest rates, such as the LIBOR, may not accurately track market interest rates.
- *Income Risk.* The Fund's income may decline if interest rates fall. This decline in income can occur because most of the debt instruments held by the Fund will have floating or variable interest rates.
- *Privately Issued Securities Risk.* Normally, CLOs are privately-offered and sold, and thus, not registered under the federal securities laws. Where an active dealer market exists for a CLO, the CLO may be eligible for resale to certain qualified institutional buyers, such as the Fund, under the Rule 144A "safe harbor" from the registration requirements of the 1933 Act. The Fund may invest in privately-issued CLOs, including those that are purchased pursuant to Rule 144A or Regulation S under the 1933 Act. Privately-issued securities typically may be resold only to qualified institutional buyers, in a privately negotiated transaction, to a limited number of purchasers, or in limited quantities after they have been held for a specified period of time and other conditions are met for an exemption from registration. Because there may be relatively few potential purchasers for such securities, especially under adverse market or economic conditions or in the event of adverse changes in the financial condition of the issuer, the Fund may find it difficult to sell such securities when it may be advisable to do so or it may be able to sell such securities only at prices lower than if such securities were more widely held and traded. At times, it also may be more difficult to determine the fair value of such securities for purposes of computing the Fund's NAV due to the absence of an active trading market. There can be no assurance that a privately-issued security previously deemed to be liquid when purchased will continue to be liquid for as long as it is held by the Fund, and its value may decline as a result.
- **LIBOR Discontinuance or Unavailability Risk.** The CLO debt in which the Fund may invest bears interest based upon LIBOR (London InterBank Offered Rate). LIBOR is intended to represent the rate at which contributing banks may obtain short-term borrowings from each other in the London interbank market. The regulatory authority that oversees financial services firms and financial markets in the U.K. has announced that, after the end of 2021, it would no longer persuade or compel contributing banks to make rate submissions for purposes of determining the LIBOR rate. As a result, it is possible that commencing in 2022, LIBOR

may no longer be available or no longer deemed an appropriate reference rate upon which to determine the interest rate on or impacting certain loans, notes, derivatives and other instruments or investments comprising some or all of the Fund's portfolio. In light of this eventuality, public and private sector industry initiatives are currently underway to identify new or alternative reference rates to be used in place of LIBOR. There is no assurance that the composition or characteristics of any such alternative reference rate will be similar to or produce the same value or economic equivalence as LIBOR or that it will have the same volume or liquidity as did LIBOR prior to its discontinuance or unavailability, which may affect the value or liquidity or return on certain of the Fund's investments and result in costs incurred in connection with closing out positions and entering into new trades. These risks also may apply with respect to changes in connection with other interbank offering rates (e.g., Euribor) and a wide range of other index levels, rates and values that are treated as "benchmarks" and are the subject of recent regulatory reform.

- **Liquidity Risk.** Liquidity risk refers to the possibility that the Fund may not be able to sell or buy a security or close out an investment contract at a favorable price or time. Consequently, the Fund may have to accept a lesser price to sell a security, sell other securities to raise cash, or give up an investment opportunity, any of which could have a negative effect on the Fund's performance. Infrequent trading of securities also may lead to an increase in their price volatility. While the CLOs in which the Fund seeks to invest are expected to be highly liquid and supported by an active market, it is possible that they may be characterized as illiquid securities under adverse market conditions resulting in a limited market for the resale of CLOs or affecting the liquidity in the fixed income market, generally.

In addition, during periods of reduced market liquidity or in the absence of readily available market quotations for particular investments in the Fund's portfolio, the ability of the Fund to assign an accurate daily value to these investments may be difficult and the Adviser may be required to fair value the investments. Fair value determinations are inherently subjective and reflect good faith judgments based on available information. Accordingly, there can be no assurance that the determination of a security's fair value in accordance with the Fund's valuation procedures will in fact approximate the price at which the Fund could sell that security at that time (i.e., the sale price could differ, sometimes significantly, from the Fund's last valuation for the security). Investors who purchase or redeem shares of the Fund on days when the Fund is holding fair valued securities may receive fewer or more shares or lower or higher redemption proceeds than they would have received if the Fund had not fair valued the securities or had used a different valuation methodology. These risks may be magnified in a rising interest rate environment and if the Fund holds a significant percentage of fair valued or otherwise difficult to value securities, the Fund may be particularly susceptible to the risks associated with valuation.

Liquidity risk also refers to the risk of unusually high redemption requests, redemption requests by certain large shareholders such as institutional investors or asset allocators, or other unusual market conditions that may make it difficult for the Fund to sell investments within the allowable time period to meet redemptions. Meeting such redemption requests could require the Fund to sell securities at reduced prices or under unfavorable conditions or access additional means of liquidity, which would reduce the value of the Fund. This risk is especially acute under current market conditions.

- **Management Risk.** The skill of the Adviser will play a significant role in the Fund's ability to achieve its investment objectives. The Fund's ability to achieve its investment objectives depends on the ability of the Adviser to correctly identify economic trends, especially with regard to accurately forecasting projected dividend and growth rates and inflationary and deflationary periods. In addition, the Fund's ability to achieve its investment objective depends on the Adviser's ability to select securities, particularly in volatile markets. The Adviser could be incorrect in its analysis of industries, companies' projected dividends and growth rates and the relative attractiveness of value securities and other matters. In addition, the Adviser's stop loss and goal setting process may not perform as expected, which may negatively impact the Fund.
- **Market Risk.** The trading prices of debt securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. The Fund's NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time.

Beginning in the first quarter of 2020, financial markets in the United States and around the world experienced extreme and in many cases unprecedented volatility and severe losses due to the global pandemic caused by COVID-19, a novel coronavirus. The pandemic has resulted in a wide range of social and economic disruptions, including closed borders, voluntary or compelled quarantines of large populations, stressed healthcare systems, reduced or prohibited domestic or international travel, supply chain disruptions, and so-called "stay-at-home" orders throughout much of the United States and many other countries. The fall-out from these disruptions has included the rapid closure of businesses deemed "non-essential" by federal, state, or local governments and rapidly increasing unemployment, as well as greatly reduced liquidity for certain instruments at times. Some sectors of the economy and individual issuers have experienced particularly large losses. Such disruptions may continue for an extended period of time or reoccur in the future to a similar or greater extent. In response, the U.S. government and the Federal Reserve have taken extraordinary actions to support the domestic economy and financial markets, resulting in very low interest rates and in some cases negative yields. It is unknown how long circumstances related to the pandemic will persist, whether they will reoccur in the future, whether efforts to support the economy and financial markets will be successful, and what additional implications may

follow from the pandemic. The impact of these events and other epidemics or pandemics in the future could adversely affect Fund performance.

- **New Fund Risk.** The Fund is a recently organized, diversified management investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision. Additionally, the Adviser has not previously managed a registered fund, which may increase the risks of investing in the Fund.
- **Transactions in Cash Risk.** The Fund intends to effect its creations and redemptions primarily for cash, rather than in-kind securities. Paying redemption proceeds in cash rather than through in kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments at an inopportune time to obtain the cash needed to pay redemption proceeds. This may cause the Fund to incur certain costs such as brokerage costs, and to recognize gains or losses that it might not have incurred if it had paid redemption proceeds in kind. As a result, the Fund may pay out higher or lower annual capital gains distributions than ETFs that redeem in kind. In addition, the costs imposed on the Fund will decrease the Fund’ NAV, unless the costs are offset by a transaction fee payable by an AP.

PORTFOLIO HOLDINGS INFORMATION

Information about the Fund’s daily portfolio holdings is available at www.AAFETFs.com. A complete description of the Fund’s policies and procedures with respect to the disclosure of the Fund’s portfolio holdings is available in the Fund’s SAI.

MANAGEMENT

Investment Adviser

Alternative Access Funds, LLC, located at 1 World Trade Center, Suite 8500, New York, New York 10007, serves as the investment adviser for the Fund. AAF, subject to the oversight of the Board, provides an investment management program for the Fund and manages the day-to-day investment of the Fund’s assets. AAF also arranges for transfer agency, custody, fund administration, distribution and all other services necessary for the Fund to operate. AAF is an SEC-registered investment adviser. For the services it provides to the Fund, AAF is entitled to a unified management fee, which is calculated daily and paid monthly, at an annual rate based on the Fund’s average daily net assets as set forth in the table below.

Fund	Management Fee
AAF First Priority CLO Bond ETF	0.25%

Pursuant to an investment advisory agreement between the Trust, on behalf of the Fund, and AAF (the “Advisory Agreement”), AAF has agreed to pay all expenses of the Fund except the fee payable to AAF under the Advisory Agreement, interest charges on any borrowings, dividends, and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, and distribution (12b-1) fees and expenses (if any).

The basis for the Board’s approval of the Advisory Agreement will be available in the Fund’s first Annual or Semi-Annual Report to Shareholders.

Portfolio Manager

The Fund is managed by Peter Coppa of AAF’s portfolio management team.

Peter Coppa has more than 18 years of experience in the asset management business, running corporate debt hedge funds and CLOs. Prior to joining AAF, Mr. Coppa spent 14 years as Managing Director at Marathon Asset Management (“MAM”). He has experience in value and event-driven distressed investing, dynamic hedging and portfolio management, corporate financial analysis, and macro-economic research. Beginning in 2009 until 2017, Mr. Coppa was a portfolio manager for MAM’s distressed and credit opportunities fund. He has invested in dozens of special credit opportunities throughout his career, in sectors including, but not limited to, airlines, telecommunications, metals and mining, energy and power, and a variety of sovereigns. Prior to 2009, Mr. Coppa was an analyst and trader for MAM’s credit opportunities, structured credit and convertible arbitrage funds. He began his career as a credit analyst at Delaware Investments. Mr. Coppa received a B.S. in economics from The Wharton School at the University of Pennsylvania.

The Fund’s SAI provides additional information about the Portfolio Manager’s compensation structure, other accounts managed by the Portfolio Manager, and the Portfolio Manager’s ownership of Shares.

Other Service Providers

Quasar Distributors, LLC (the “Distributor”), an affiliate of the administrator, is the principal underwriter and distributor of the Fund’s shares. The Distributor’s principal address is 111 East Kilbourn Avenue, Suite 2200, Milwaukee, Wisconsin 53202. The Distributor will not distribute shares in less than whole Creation Units, and it does not maintain a secondary market in the shares. The Distributor is a broker-dealer registered under the Securities Exchange Act of 1934 and a member of the Financial Industry Regulatory Authority, Inc. (“FINRA”). The Distributor has no role in determining the policies of the Fund or the securities that are purchased or sold by the Fund and is not affiliated with the Adviser, or any of their respective affiliates.

U.S. Bancorp Fund Services, LLC, located at 615 East Michigan Street, Milwaukee, Wisconsin 53202, serves as the administrator, transfer agent and index receipt agent for the Fund.

U.S. Bank National Association, located at 1555 N. Rivercenter Drive, Suite 302, Milwaukee, Wisconsin 53212, serves as the custodian for the Fund.

Morgan, Lewis & Bockius LLP, located at 1111 Pennsylvania Avenue, N.W., Washington, D.C. 20004, serves as legal counsel to the Trust.

Cohen & Company, Ltd., located at 1350 Euclid Avenue, Suite 800, Cleveland, Ohio 44115, serves as the Fund's independent registered public accounting firm. The independent registered public accounting firm is responsible for auditing the annual financial statements of the Fund.

HOW TO BUY AND SELL SHARES

The Fund issues and redeems Shares at NAV only in Creation Units. Only APs may acquire Shares directly from the Fund, and only APs may tender their Shares for redemption directly to the Fund, at NAV. APs must be (i) a broker-dealer or other participant in the clearing process through the Continuous Net Settlement System of the NSCC, a clearing agency that is registered with the SEC; or (ii) a DTC participant (as discussed below). In addition, each AP must execute a Participant Agreement that has been agreed to by the Distributor, and that has been accepted by the Transfer Agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

Most investors buy and sell Shares in secondary market transactions through brokers. Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC's participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or "street name" through your brokerage account.

Share Trading Prices on the Exchange

Trading prices of Shares on the Exchange may differ from the Fund's daily NAV. Market forces of supply and demand, economic conditions and other factors may affect the trading prices of Shares. To provide additional information regarding the indicative value of Shares, the Exchange or a market data vendor disseminates information every 15 seconds through the facilities of the Consolidated Tape Association, or other widely disseminated means, an updated "intraday indicative value" ("IIV") for Shares as calculated by an information provider or market data vendor. The Fund is not involved in or responsible for any aspect of the calculation or dissemination of the IIVs and makes no representation or warranty as to the accuracy of the IIVs. If the calculation of the IIV is based on the basket of Deposit Securities and/or a designated amount of U.S. cash, such IIV may not represent the best possible valuation of the Fund's portfolio because the basket of Deposit Securities does not necessarily reflect the precise composition of the current Fund portfolio at a particular point in time and does not include a reduction for the fees, operating expenses, or transaction costs incurred by the Fund. The IIV should not be viewed as a "real-time" update of the Fund's NAV because the IIV may not be calculated in the same manner as the NAV, which is computed only once a day, typically at the end of the business day. The IIV is generally determined by using both current market quotations and/or price quotations obtained from broker-dealers that may trade in the Deposit Securities.

Frequent Purchases and Redemptions of Shares

The Fund imposes no restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by Fund shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with the Fund, are an essential part of the ETF process and help keep Share trading prices in line with NAV. As such, the Fund accommodates frequent purchases and redemptions by APs. However, frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, the Fund employs fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs

incurred by the Fund in effecting trades. In addition, the Fund and the Adviser reserve the right to reject any purchase order at any time.

Determination of Net Asset Value

The Fund's NAV is calculated as of the scheduled close of regular trading on the Exchange, generally 4:00 p.m. Eastern Time, each day the Exchange is open for business. The NAV is calculated by dividing the Fund's net assets by its Shares outstanding.

In calculating its NAV, the Fund generally values its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. The values of non-U.S. dollar denominated securities are converted to U.S. dollars using foreign currency exchange rates generally determined as of 4:00 p.m., London time. If such information is not available for a security held by the Fund or is determined to be unreliable, the security will be valued at fair value estimates under guidelines established by the Board (as described below).

Fair Value Pricing

The Board has adopted procedures and methodologies to fair value Fund securities whose market prices are not "readily available" or are deemed to be unreliable. For example, such circumstances may arise when: (i) a security has been de-listed or has had its trading halted or suspended; (ii) a security's primary pricing source is unable or unwilling to provide a price; (iii) a security's primary trading market is closed during regular market hours; or (iv) a security's value is materially affected by events occurring after the close of the security's primary trading market. Generally, when fair valuing a security, the Fund will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer's business, recent trades or offers of the security, general and/or specific market conditions and the specific facts giving rise to the need to fair value the security. Fair value determinations are made in good faith and in accordance with the fair value methodologies included in the Board-adopted valuation procedures. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the security upon the sale of such security.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by registered investment companies in the securities of other investment companies, including Shares. Registered investment companies are permitted to invest in the Fund beyond the limits set forth in section 12(d)(1), subject to certain terms and conditions set forth in an SEC exemptive order issued to the Trust, including that such investment companies enter into an agreement with the Fund.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

The Fund intends to pay out dividends, if any, and distribute any net realized capital gains to its shareholders at least annually. The Fund will declare and pay capital gain distributions, if any, in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Fund. Your investment in the Fund may have other tax implications. Please consult your tax adviser about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

The Fund intends to qualify each year for treatment as a regulated investment company (a "RIC"). If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, the Fund's failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when the Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (institutional investors only). The Tax Cuts and Jobs Act (the "Tax Act") made significant changes to the U.S. federal income tax rules for taxation of individuals and corporations, generally effective for taxable years beginning after December 31, 2017. Many of the changes applicable to individuals are temporary and would apply only to taxable years beginning after December 31, 2017 and before January 1, 2026. There are only minor changes with respect to the specific rules applicable a RIC, such as the Fund. The Tax Act, however, made numerous other changes to the tax rules that may affect shareholders and the Fund. You are urged to consult with your own tax adviser regarding how the Tax Act affects your investment in the Fund.

Taxes on Distributions

The Fund intends to distribute, at least annually, substantially all of its net investment income and net capital gains. For federal income tax purposes, distributions of investment income are generally taxable as ordinary income or qualified dividend income. A portion of dividends received from the Fund (but none of the Fund's capital gain distributions) may qualify for the dividends-received deduction for corporations. Taxes on distributions of capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned his or her Shares. Sales of assets held by the Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by the Fund for one year or less generally result in short-term capital gains and losses. Distributions of the Fund's net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by the Fund as capital gain dividends ("Capital Gain Dividends") will be taxable as long-term capital gains, which for non-corporate shareholders are subject to tax at reduced rates of up to 20% (lower rates apply to individuals in lower tax brackets). Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional shares.

Distributions reported by the Fund as "qualified dividend income" are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided holding period and other requirements are met. "Qualified dividend income" generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that the Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from the Fund that are attributable to dividends received by the Fund from U.S. corporations, subject to certain limitations.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from the Fund.

U.S. individuals with income exceeding specified thresholds are subject to a 3.8% Medicare contribution tax on all or a portion of their "net investment income," which includes interest, dividends, and certain capital gains (generally including capital gains distributions and capital gains realized on the sale of Shares). This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by the Fund before your investment (and thus were included in the Shares' NAV when you purchased your Shares).

You may wish to avoid investing in the Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable even though it may economically represent a return of a portion of your investment.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by the Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. The Fund may, under certain circumstances, report all or a portion of a dividend as an "interest-related dividend" or a "short-term capital gain dividend," which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met.

Under legislation generally known as "FATCA" (the Foreign Account Tax Compliance Act), the Fund is required to withhold 30% of certain ordinary dividends it pays to shareholders that are foreign entities and that fail to meet prescribed information reporting or certification requirements.

The Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that he, she or it is not subject to such withholding.

Taxes When Shares Are Sold on the Exchange

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. The ability to deduct capital losses may be limited.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP's aggregate basis in the securities delivered, plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP's basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus

any cash received for such Creation Units. The Internal Revenue Service may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing “wash sales” (for an AP who does not mark-to-market its holdings) or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax adviser with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less.

The Fund may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Fund may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in kind. As a result, the Fund may be less tax efficient if it includes such a cash payment in the proceeds paid upon the redemption of Creation Units.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Fund. It is not a substitute for personal tax advice. You also may be subject to state and local tax on Fund distributions and sales of Shares. Consult your personal tax adviser about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled “Federal Income Taxes” in the SAI.

DISTRIBUTION PLAN

The Board has adopted a Distribution and Service Plan (the “Plan”) pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year for certain distribution-related activities and shareholder services.

No Rule 12b-1 fees are currently paid by the Fund, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of Fund assets, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

The Fund is new and therefore does not have any information regarding how often Shares are traded on the Exchange at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of the Fund.

ADDITIONAL NOTICES

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of, the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser and the Fund makes no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly.

FINANCIAL HIGHLIGHTS

Financial information is not available because the Fund had not commenced operations prior to the date of this Prospectus.

AAF First Priority CLO Bond ETF

Adviser	Alternative Access Funds, LLC 1 World Trade Center, Suite 8500 New York, New York 10007	Transfer Agent and Administrator	U.S. Bancorp Fund Services, LLC d/b/a U.S. Bank Global Fund Services 615 East Michigan Street Milwaukee, Wisconsin 53202
